PaperCut's Mobility Print - How to print from a Chromebook							

Q

- 2. Install the Mobility Print Chrome extension.
- 3. Open the page to print.
 - The way you print is different depending on the app you're printing from. For more information, see the documentation for the app. When you select a printer, make sure you select a Mobility Print printer as identified by the PaperCut icon.
- 4. Print the content.
 - For example, to print from Microsoft Word, press Ctrl+P, select a printer; then click Print.
- 5. When prompted, sign in.

Q Tip

- Need to assign an account to your print job? You can do that at the printer or via the Mobile web client.
- Your Chromebook must run ChromeOS version 114+.

Ρ

We are using Papercut on our new Ricoh printers for Chromebooks. We can print via de Mobility App, but how can we change the drivers so we can get the advanced print settings? Any idea? Thanks in advance.

Support

Q

output.

We do have an open feature request to add more advance print settings for Chromebooks. If you would like to raise a support ticket with us @ support.papercut.com and mention MOB-685 then we can attach your ticket to the request and keep you updated on it's progress.

In the meantime, we have found that some customers have implemented a work around by creating separate print queues for specific features (hole-punching, stapling etc) and then publishing multiple queues for users defined by the naming convention. Whilst not a perfect solution it may help achieve what you are looking for.

Cheers!

Thanks for the info. We check if the print queues are an option for our setup.

If I've setup cloned printers for Mac and Windows, how do I just enable a printer for ChromeOS? It just adds another all-devices print queue if I add it from Mobility Print server.

 Hi,

So that the Mobility print client pulls the printers from the Print Deploy server you can follow the steps in this KB: https://www.papercut.com/he...

If you have any questions or would like any further assistance then please don't hesitate to open a support ticket with us here: https://support.papercut.com

How to use it in Chrome Os Flev? I have Xerov 2025 WorkCentre and Leannot print https://www.papercut.com/help/manuals/mobility-print/setting-up-a-device-mdns-dns/client-setup-chrome/

Q

ні Рете,

Thanks for your enquiry. You can find further information and the system requirements here:

David Dunn

https://www.papercut.com/he...

For support requests, please open a ticket @ support.papercut.com. Please provide as much information surrounding your issue.

Hi. I use Chrome OS Flex and I don't know how to start. Can you help me? What should I do first?
